Profile

Computer Engineering Student focused on Frontend and Mobile Development. Experienced in building cross-platform applications and Full-Stack workflows. Committed to clean code principles and experienced in Agile environments. Aiming to leverage technical skills in end-to-end software development to contribute to professional engineering teams.

Experience

- 11.2023 – 09.2024 **Mobile & Frontend Developer**
IEEE Istanbul University-Cerrahpaşa
- Designed and developed a cross-platform mobile application for Teknofest using React Native. Created high-fidelity UI/UX designs using Figma and translated them into responsive, functional code. Served as **Team Lead** for 5 developers, managing task distribution via Agile methodologies and ensuring 100% on-time project delivery. Integrated complex state logic and backend services to build an end-to-end functional prototype

Education

- 2022 – 2027 **Istanbul University-Cerrahpaşa**
Computer Engineering
- GPA: **3.72** / 4.00
 - English Preparatory Program (2022 – 2023)
- 2018 – 2022 **Pertevniyal High School**

Projects

Eco-Friendly Social Media App - Teknofest Project

- Developed 15+ responsive mobile screens using React Native and integrated them with a scalable backend architecture built on NestJS, MongoDB, and TypeScript. Implemented secure authentication and state management, utilizing JWT-based Role-Based Access Control and the Context API for efficient data flow. Translated high-fidelity Figma designs into responsive, functional code, focusing on performance optimization and clean architecture principles.

Task Management System

- Engineered a full-stack platform using Node.js, Express, and MySQL with Prisma ORM for efficient data management. Designed a responsive interface with React and Tailwind CSS, incorporating a secure JWT-based authentication system. Containerized the application using Docker, reducing environment setup time by 50% and ensuring consistency across deployment stages. Implemented RBAC, team management, and real-time notifications to enhance platform collaboration.

Traffic Density Clustering Analysis

- Performed data clustering on Istanbul traffic datasets using K-Means and Python to model density zones. Created statistical data visualizations using Folium, Seaborn, and Matplotlib to display regional traffic distributions.

Skills

Programming & Frameworks: JavaScript, React Native, React.js, SQL, C++, Node.js, Tailwind CSS, HTML, Python

Tools & Platforms: Git, GitHub, MySQL, Figma, Docker, Prisma, MongoDB, GCP, Unity

Professional Skills: Project management, UI/UX design, Agile/Scrum methodologies, Team leadership, Problem solving, Clean code principles, Management information systems

Certificates

- React Native - Patika.dev
- Project Management - BTK
- AI Bootcamp - Miuul
- Frontend Web - Patika.dev
- Game Development

Languages

- English
- Turkish
